

System Overview

=====

This document provides an overview of the entire system design including its scope, architecture, and high-level components. The system is designed to facilitate user interaction with various modules such as authentication, data entry, reporting, and analytics.

Key Modules:

- Authentication and Authorization
- Data Management Layer
- User Interface Components
- Integration APIs

Technologies Used:

- Frontend: React.js
- Backend: Node.js with Express
- Database: PostgreSQL
- Hosting: AWS Cloud Infrastructure

The system is modular, scalable, and designed to meet enterprise standards in terms of security and performance.
